

MYP Global Context Graphic Organizer

1) Circle the global context that you are selecting for this project:

- ★ Scientific & Technical Innovation
- ★ Globalization & Sustainability
- ★ Fairness & Development

Excellent, thoughtful, + logical connections have been made. This context is the best fit!

2) Why is this the "lens" through which you are looking at the issue of water being wasted, I look at our water source. All decisions that humans make have global repercussions. All people are affected by the way we use water.

3) What connections can you make between your issue and the global context?

The Problem	Existing Solutions	Your Thoughts, Feelings, Beliefs on the Topic
<ul style="list-style-type: none"> • less than 1% of all of earth's water is available to the human population. (that's not a lot for 7 billion people) • Water in rural areas is not as attainable compared to developed areas. • Water is wasted in developed areas, which affects the amount of water available all around the world. • Water has to be looked at as a system. An inconsistent, corrupt system. • Water doesn't always return to the same place in the same quantity and quality. If water is gone, we die. 	<ul style="list-style-type: none"> • National Fix a Leak Week focuses on the opportunity to save thousands of gallons of water by informing about and teaching people how to fix leaks. • The firefighters drought system benefits the community because they are all part of a larger system. • The community that started the drought idea for firefighters made an impact. Many places across the country use the same idea. (idea-use as little water as possible) • All existing solutions considered where there is a lot of water being wasted. Almost all are conservation techniques. 	<p>Water is one of the most vital things in all of nature. Without it, nothing can survive. I believe that people should be more cautious of the decisions they make. Even the smallest of communities</p>

• Human decisions impact environment
 • water is not being used conservatively.

4) Why do you believe this global context the "best fit" for your project?

This global context is the best fit for my project because all of the ideas are focused on how people and the water we use are related. Globalization and stability is about finding connections. With an issue, the reason the issue is present is what is looked for. Then people look how they can reduce that connection between the cause and effect. What I mean by this is, a cause can be found with this lens. Once a cause is found, the issue can be reduced or solved.

Specifically, with the issue of wasted water, when the source of it is identified (ignorance of repercussions), a solution can be developed, like a way to inform people of what their water using habits do to people all across the globe. (because the main factors are known)
